Adding and changing slots in this way **only affects one shift**. If you want to make slot changes that affect multiple days or shifts, you must change the reservation sheet assigned to those shifts. See *IV. Editing Reservation Sheets* for more details.

Sheets and Floor Layouts

The OpenTable system is based on **reservation sheets**. Reservation sheets are made up of time slots that represent when the restaurant will accept dining reservations. Typically, restaurants create several different reservation sheets based on the number of tables available and differences in the operational flow (depending on day, shift).

Floor layouts are computer representations of the restaurant's dining rooms that will display on the Floor View for seating guests during a shift. Floor layouts are assigned to reservation sheets.

Scheduling

Default Schedules are the restaurant's REGULAR schedule for each of the seven days of the week (Sunday – Saturday). Set up your Default Schedule by assigning reservation sheets to the open shifts for each day of the week. Once configured, the Default Schedules will be in place throughout the year.
